

July 28, 2011

Dear FCC Commissioners:

I write this in strong opposition to the potential approval of the spectrum licensing to LightSquared, Inc. as proposed in occupying the spectrum adjacent to the GPS Spectrum.

Our company has invested over \$2M in developing our products which are completely reliant on obtaining clear and accurate GPS signals. The proposed LightSquared systems will effectively render our systems, business plan, and service offering unusable.

Furthermore, our customers who are mainly Government organizations at all levels, have invested in our systems and rely on them for day to day municipal operations and disaster management.

Also the most obvious negative effect would be the millions upon millions of people who purchased consumer navigation devices, businesses that rely on high accuracy GPS solutions, and Transportation systems that rely on functional GPS receivers for safety, navigation, and automation.

It would be unconscionable and irrational to approve this proposal in favor of one company and in spite of the hundreds of millions of individuals and businesses who will be extremely adversely affected.

Your vote against the proposal will be a vote for the many, rather than the very few. Please err on the side of caution and public concern.

Thank you for your consideration
